

Rhino Safety launches innovative dashboard to streamline workplace safety

4 months ago

Rhino Safety, a health and safety consultancy based in Cheshire, has unveiled its latest solution to help businesses manage workplace safety more efficiently.

The new Rhino Safety Dashboard is a comprehensive digital platform designed to centralise health and safety processes, allowing employers to develop a top-level understanding of the health and safety needs of their business.

The consultancy decided to invest in its own purpose-built platform after noting the challenges many businesses continue to face in managing their workplace health and safety. Outdated systems, scattered documentation, and reactive approaches to risk management often lead to inefficiencies and missed opportunities to eliminate and mitigate risks.

The ability to keep pace with the needs of a business was also a driving factor behind the development of the platform. As businesses grow, employers are often required to change their health and safety platforms to keep pace with the needs of their workplace. Developing a platform that can scale with business needs helps to reduce operational costs and prevents new risks from being missed.

As part of that scalability, the new platform can be implemented by organisations of all sizes, from new start-ups to established blue-chip organisations. The platform's adaptability also caters to industry-specific requirements, ensuring businesses can address the unique challenges across different sectors and adapt their processes to new regulations in real time.

It's particularly beneficial for businesses managing multiple sites or those operating in industries with strict regulatory requirements. By centralising tasks and automating processes, the dashboard can be used

across multiple locations and can adapt to address their specific needs under current regulations.

Key Platform Features

- **Accident Reporting & Analytics:** Businesses can log incidents, track trends, and analyse data to identify patterns and prevent future risks.
- **Document Repository:** A secure location for storing all health and safety documents, ensuring easy access and organisation.
- **Proactive Risk Monitoring:** Tools for identifying risks early and addressing them before they escalate into major issues.
- **Customisable & Scalable Design:** The dashboard can be tailored to meet the specific needs of each business and scale as they grow.
- **User-Friendly Interface:** Designed for ease of use, encouraging adoption across teams and departments.
- **Compliance Overview:** Provides a clear view of compliance status across multiple sites, helping businesses stay up-to-date effortlessly.

The platform provides a streamlined approach to managing health and safety processes, offering a clear, top-level view that reduces administrative tasks and saves time. Its proactive risk monitoring helps to identify and address potential hazards before they lead to accidents, contributing to a safer workplace. It also enables easy tracking of compliance status across multiple sites, which can help reduce the pressure during audits or inspections.

In addition, the platform is customisable and scalable, allowing it to grow with the business and avoid the need for new systems as requirements change. It can be adapted to meet the specific needs of various industries, from office settings to construction, engineering, and academia, ensuring it remains relevant across different sectors.

Speaking on the release of the new platform, Simon Walter, Director of Rhino Safety said: “Our mission has always been to make health and safety simple, effective, and accessible for businesses of all sizes. With our new dashboard, we’re taking that mission to the next level—providing companies with a powerful tool that not only ensures compliance but actively helps create safer work environments.”

The release of the platform comes after a year of growth for Rhino Safety in 2024. The health and safety consultancy has expanded its reach to include partners in the United Arab Emirates, working with clients across sectors to improve their health and safety performance and improve worker safety.
