

Ede's (UK) Limited: Leading the Way in Sustainable Waste Management Amid Regulatory Changes

7 months ago

As waste disposal regulations evolve to address environmental concerns, [Ede's \(UK\) Limited](#) remains at the forefront, ensuring full compliance and offering expert guidance to our clients. Our commitment to sustainability is unwavering, with waste management being a pivotal aspect of our operations.

We are accredited to ISO 14001:2015, which has supported us in continually reviewing and improving our management of environmental impacts such as waste. Having a detailed site waste management plan for each job, we can ensure we prioritise re-use and repurposing over recycling. Energy from waste is our last resort, and we send no waste to landfill.

In response to recent regulatory updates, including those concerning Persistent Organic Pollutants (POPs), we have enhanced our waste management services. Our specialised removal and recycling processes for chairs and upholstered items ensure that materials containing POPs are identified, handled, and disposed of responsibly at authorised facilities.

Furthermore, our partnerships with accredited waste management companies enable the extraction of secondary raw materials, such as metals, plastics, and wood, from general waste. This approach not only supports environmental sustainability but also offers cost-effective solutions for our clients.

At Ede's, we are committed to assisting our clients in navigating these regulatory changes seamlessly. Our expertise ensures that your waste management practices align with current regulations and sustainability goals. We are here to support you every step of the way, reinforcing our collective responsibility to protect
