

3% increase in UK business investment should result in employment boost

6 months ago

The latest research from [The Global Payroll Alliance \(GPA\)](#), reveals that investment into UK business has increased by 3% in the past year, driven by large boosts to the likes of clothing manufacturing, electricity production, and agriculture.

GPA's analysis of ONS business investment data* shows that between 2023 and 2024 (latest available data) total investment into UK businesses increased by 3%.

The production sector saw the biggest increase, with investment rising by 24.6% on the year. This was driven by a strong performance from all three production subsectors. Investment into Electricity, Water & Gas production rose by 31.9%; investment into Agriculture, Forestry & Fishing production increased by 20.9%; and investment into Mining & Quarrying production saw an 11% boost.

Similarly, the UK's Distribution and Construction sectors also benefited from annual investment increases, rising by 4% and 3.1% respectively.

Meanwhile, investment into the Manufacturing sector remained flat overall (0.0%), but some of its subsectors did see a good investment boost, not least Textiles, Clothing, Leather & Footwear manufacturing (81.2%), Food, Drink & Tobacco manufacturing (10.1%), and Engineering & Vehicles manufacturing (2.2%).

And while investment into the overall 'Other Services' sector fell by -1.3%, some of its subsectors still saw an increase. Investment into the Transportation & Storage services subsector increased by 12.3%, while Hotels & Restaurants services and Information & Communication services saw increases of 8.6% and 2.8% respectively.

Melanie Pizzey, CEO and Founder of the Global Payroll Alliance, says: “Since the Labour government’s Autumn Statement, concerns about job losses have been rife among UK employees, highlighted by a [77% increase in online searches for ‘redundancy rights’ since October 2024](#).

However, the increased investment into UK businesses – especially production, distribution, and construction – should result in the creation of many new jobs over the coming years. We just have to hope that the financial boost businesses are seeing results in a concerted effort to boost productivity and therefore employment. There remains a risk of instability in the UK economy due to the government’s seeming inability to settle firmly on a plan for growth, but we remain quietly optimistic that the increase of money moving into businesses will result in an increase of money moving into people’s pockets.”
