

NHS framework award for cleaning and auditing software

11 months ago

Facilities managers can now buy [KleenCheck®](#), Orange Technology Ltd's cloud-based cleaning compliance platform, straight from the NHS Supply Chain catalogue after the SME was named on the 2025 Cleaning Equipment & Associated Products framework (Lot 10) [supplychain.nhs.uk].

KleenCheck® modules include Pro Audit, FR1 (critical clean SOPs) and FR6 (training & induction).

KleenCheck lets staff attach photos and videos to each task, generates real-time percentage scores and stores reports securely in the cloud. It is anticipated that users will be able to reduce audit preparation times by 60 percent.

"Being on the framework streamlines procurement for both hard and soft FM contractors," explained Peter Lucas, CEO. "It's the perfect way to mark our 30-year journey from early compliance tools to today's AI-ready cleaning platform."

Orange Technology was established in 1995, supplying workforce, onboarding and audit software to over 100 enterprises and academic institutions.
