

PTSG adds to its track record of successful dry riser installations

7 months ago

[Premier Technical Services Group Ltd \(PTSG\)](#), via constituent company UK Dry Risers Ltd, has completed a project to install a new dry riser system for one of its clients.

The focus, as always, was on creating clean, compliant and robust fire safety infrastructure. From the exterior inlet cabinet to the internal riser and landing valves, everything was installed to a high standard, ensuring reliable access for emergency services when it's needed most.

The first-class service that the team from UK Dry Risers Ltd provided has helped it to become the UK's largest independent national provider of specialist installation and maintenance services for wet and dry risers.

Dry risers are a crucial fire safety feature, especially in tall buildings, as they provide a dedicated water source for firefighters to combat blazes on upper floors. They allow for rapid access to water, minimising fire spread and potential damage. Their design also minimises water damage from leaks or accidental activation.

UK Dry Risers Ltd works nationally on all kinds of projects, from a small care home in Dundee to a 50-storey apartment block in Central London. As part of [PTSG's Fire Solutions division](#), UK Dry Risers is one facet of a comprehensive portfolio of services that ensures safety is the foundation upon which buildings are constructed – ensuring duty holders comply with the latest industry regulations at all times.
