

# PTSG on track to deliver fire protection for national train operator

7 months ago

Premier Technical Services Group Ltd (PTSG) has secured a new contract to deliver specialist fire solutions for one of the UK's leading train operators, providing long-distance services across the West Coast Main Line.

Covering 22 key locations, the three-year agreement will see engineers from PTSG Fire Solutions Ltd carry out planned preventative maintenance on a wide range of fire and security systems. These works will support safety and compliance across the operator's estate, which includes high-profile sites spanning London, the West Midlands, the North West, North Wales and Scotland.

The rail operator recently modernised its rolling stock with the introduction of 23 new Hitachi A-train units, replacing the former Class 221 Super Voyagers. Maintenance for the new fleet is undertaken at Alstom's Oxley depot in Wolverhampton, a key location included in the scope of the contract.

Train Operating Companies (TOCs) are central to the UK's transport infrastructure, operating under the National Rail umbrella. This partnership reflects PTSG's trusted reputation and its ability to support safety-critical industries with tailored compliance solutions.

PTSG Fire Solutions Ltd, the largest of the Group's five divisions, offers a comprehensive suite of services – including fire detection and alarms, suppression systems, passive fire protection, and security installations. The award continues PTSG's growing presence in the transport sector and underscores its commitment to supporting essential services with high-performance, nationwide coverage.
