

Amulet wins security contract with the Institute of Directors

9 months ago

[Amulet](#) has expanded its corporate portfolio with a five-year (3+2) security contract with the Institute of Directors (IoD). This follows hot on the heels of its Bank of England win and covers guarding services at the IoD's iconic members' club at 116 Pall Mall, central London.

This is the first time Amulet has delivered security for the organisation, following the continued success of its sister brand, Portfolio, which has delivered cleaning services for the IoD since 2021. Together, the two brands will provide an integrated soft services solution for one of the UK's most prestigious business institutions.

Amulet was awarded the security contract following a competitive tender, impressing with its forward-thinking approach, deep sector expertise and ability to guide the client on future innovations for the heritage-listed site. Amulet's status as an employee-owned business also made it stand out from the field.

A dedicated core team of officers will be supported by a relief team to ensure service continuity and deliver on the IoD's busy events programme.

Adam Overton, head of national premises and facilities at the IoD, said: "Amulet stood out for its fresh perspective on what security means in a members' club environment. They didn't just meet the brief, they brought ideas to the table that challenged our thinking and aligned perfectly with our vision for 116 Pall Mall as a forward-looking, dynamic venue. We're excited to see how their expertise will enhance both our day-to-day operations and our event experience."

Kieran Mackie, managing director at Amulet, said: "Securing a contract with the Institute of Directors is a proud moment for Amulet and underlines the strength of our proposition in the corporate sector. This win,

alongside our recent appointment at the Bank of England, reflects our growing reputation for delivering intelligent, tailored security solutions in prestigious environments. We're excited to support the IoD and help shape the future of security at this historic and vibrant location."
