

MARCH Unveils Service+ Compliance Contract to support regulatory risk management

7 months ago

MARCH has launched its new [Service+ Compliance Contract](#), a powerful, structured solution designed to help businesses stay ahead of risk. From equipment safety to regulatory inspections and asset performance, Service+ empowers organisations to take control of engineering compliance, before issues disrupt operations.

The contract is aimed at organisations operating in highly regulated sectors such as manufacturing, food and beverage, life sciences, and utilities. It is designed to help duty holders meet evolving regulatory standards such as PUWER, DSEAR/ATEX, EAWR, and PSSR, – supporting compliance, enhancing safety, and identifying risks before they impact performance.

The service offers a structured and regular approach to engineering compliance that can be tailored to each organisation’s needs. This includes the option to embed an onsite team to manage and deliver assessments, carry out remedial work on new or ageing assets to meet current regulations and implement mitigating safety measures to help reduce unplanned capital expenditure. The service is delivered by specialist teams based across MARCH’s UK network.

David Mallinson, managing director at MARCH said: “Companies in regulated industries are under constant pressure to balance safety and compliance with productivity and cost control. Our new compliance contract provides a practical way to integrate compliance management directly into daily operations, removing uncertainty and complexity from the process. By spreading the cost and proactively managing risks, we can help our customers to stay in control of their budgets.”

Mallinson added: “Regulations are constantly changing. Our structured approach helps companies stay

ahead of changes, ensuring their operations remain safe, efficient, and compliant over the long term.”

Customers also gain access to a digital compliance dashboard that provides real-time monitoring of project progress, risk assessments, and compliance documentation. The contract is available as a standalone service or can be integrated within MARCH’s broader asset management and maintenance offerings.
