

ABM Connect™ for Life Sciences Launches in Ireland to Strengthen Regulatory Compliance and Operational Efficiency

9 months ago

ABM, a leading international provider of facility, engineering, and infrastructure solutions, has announced the launch of ABM Connect™ for Life Sciences in Ireland. The platform is designed to help life sciences organisations improve accuracy, meet stringent regulatory requirements, and enhance operational efficiency in controlled environments.

A Digital, Audit-Ready Compliance Tool

ABM Connect for Life Sciences replaces paper-based documentation with a secure, fully digital system that creates an instant, audit-ready record of all activities. By guiding frontline teams step-by-step through their cleaning, maintenance, and operational protocols, the platform helps reduce errors, improve inspection readiness, and streamline day-to-day processes in compliance with the European Medicines Agency's Annex 11 guidelines for electronic records and electronic signatures.

The system is accessible via a secure mobile application on company-issued devices, giving authorised personnel immediate access to live schedules, standard operating procedures (SOPs), and task instructions. It also features real-time, automated task management and verification, ensuring that work is completed according to validated processes by trained and compliant staff.

Supporting Compliance in a Highly Regulated Sector

Manual documentation and logbooks in life sciences facilities can be time-consuming, prone to error, and costly to maintain. ABM Connect for Life Sciences digitises and centralises these records, helping

companies reduce the likelihood of deviations, minimise rework, and improve oversight.

“Clients across the life sciences landscape are under pressure to deliver efficiency without compromising safety or compliance,” said Dinny Crowe, Vice President, Operations, ABM. “ABM Connect for Life Sciences builds on decades of sector expertise to provide a precision-driven, validated process that gives our clients real-time visibility into operations and readiness for inspection at any time.”

Clients who utilise ABM Connect for Life Sciences state that it has improved their documentation compliance while reducing the costs and environmental impact of maintaining paper logbooks. It is a smarter, more sustainable approach to compliance.

A Strategic Expansion in Ireland

This launch marks a significant step in ABM’s growth within Ireland’s life sciences sector, where the company is expanding its specialist services. Globally, ABM supports more than 85 million square feet of life sciences facilities daily, with over 500 GMP-trained team members working in highly regulated, controlled environments.

ABM is an active member of leading life sciences professional associations, including the International Society of Pharmaceutical Engineers (ISPE), Institute of Environmental Sciences and Technology (IEST), Massachusetts Biotechnology Council (MassBio), BioCom California, and INTERPHEX. With more than 25 years of life sciences expertise, ABM’s Irish team delivers tailored, end-to-end support, combining global best practices with deep regulatory knowledge to meet the unique needs of pharmaceutical, biotech, and medical device manufacturers.

ABM Connect for Life Sciences is already in use across the United States with some of the world’s leading pharmaceutical and biotech companies,
