

Conference programme announced for Smart Buildings Show 2025

3 hours ago

With just a few weeks to go before the doors open at the UK's only dedicated commercial smart buildings exhibition, the conference programme for [Smart Buildings Show 2025](#) has been announced.

Taking place at ExCeL London on 15-16 October, Smart Buildings Show gives visitors free access to the best speakers from across the sector. This year's event will feature over 120 speakers across four separate theatres:

Energy Management Theatre

Operational efficiency and cost reduction have never been more important, making visibility into energy usage, and the ability to proactively manage energy, essential. The more you know about your energy, the better you can manage it.

Controls & Network Theatre

This theatre will look at the physical devices in smart buildings including building controls, energy efficiency, BEMS, sensors, shading and lighting.

IT & Digital Infrastructure Theatre

Smart Infrastructure is the result of combining physical infrastructure with digital infrastructure, providing improved information to enable better decision making, faster and cheaper. Without a smart infrastructure there are no smart buildings.

Management & Proptech Theatre

This theatre will look at how a smart building is managed and operated, including facility management, workplace software, advanced security solutions, sector analysis and market information, system integration, data aggregation and analytics, and services management.

Event director Ian Garmeson said: "Smart Buildings Show 2025 will host another packed conference programme featuring a leading line-up of speakers covering a range of the key issues in the smart buildings industry. From panel discussions on energy management and cyber security to expert advice on indoor air quality and artificial intelligence, the Smart Buildings Show conference will equip you with the knowledge you need to make your buildings truly smart."
