

PTSG strengthens fire damper expertise with NAADUK training partnership

10 months ago

Indepth Managed Services, part of [Premier Technical Services Group Ltd](#) (PTSG), has enhanced its fire safety capabilities through a new partnership with the NAADUK Training Academy (National Association of Air Duct Specialists UK).

Fire dampers play a vital role in life safety, preventing the spread of fire and smoke through ventilation systems. To guarantee they function correctly, engineers must be trained to the highest standards. Through NAADUK's accredited training, Indepth engineers are gaining specialist knowledge in:

- Current UK regulations and compliance requirements
- Advanced inspection and testing techniques
- Industry best practice and latest developments

The investment will help ensure maximum safety for building users, improved compliance for clients, and continued technical excellence across PTSG's fire safety services.

A spokesperson for Indepth said: "Fire safety is an area where there can be no compromise. By equipping our engineers with the latest specialist training, we are ensuring that our clients benefit from unrivalled technical knowledge and the reassurance of compliance at every stage."

Indepth's fire damper services sit within PTSG Fire Solutions Ltd, the Group's largest division, which delivers a full range of life safety systems to customers nationwide.
