

PTSG to deliver specialist fire safety works for global services leader

3 months ago

Premier Technical Services Group Ltd (PTSG) has secured a new contract to provide specialist fire safety installations for Serco Group, one of the UK's largest outsourced services providers.

Serco, which operates across defence, health, transport, justice and citizen services, has appointed PTSG Fire Solutions Ltd to install new fire doors at sites in Wishaw, with further works scheduled across Dumfries & Galloway.

With fire doors playing a critical role in protecting buildings and their occupants, demand for compliant installation and maintenance continues to rise. High-traffic environments—common across Serco's estate—can accelerate wear and compromise performance if issues go unchecked.

PTSG's fire safety specialists bring extensive experience and formal accreditation, ensuring every installation meets the strict requirements of the FIRAS and BM Trada Q-Mark certification schemes. Their expertise supports organisations nationwide in strengthening their passive fire protection measures and maintaining full compliance.

This latest contract reinforces PTSG's position as a trusted partner for complex, safety-critical projects across the public and private sectors.
