

Trinity fires a salvo at Security and Fire Excellence Awards – four-category shortlist underlines UK leadership

2 months ago

[Premier Technical Services Group Ltd](#) (PTSG)'s fire & security arm, Trinity Fire & Security Systems, was among the standout contenders at the Security and Fire Excellence Awards 2025, after being shortlisted in four of the competition's top categories.

The company was recognised in:

- Active Fire Project of the Year
- Passive Fire Project of the Year
- Security or Fire Solution of the Year
- Security or Fire Sustainability Champion

Although Trinity did not secure a win on the night, the breadth of the shortlisting underscores its continuing reputation as one of the UK's leading providers of integrated fire and security solutions.

This latest recognition comes on the back of an already notable year. Earlier in 2025, Trinity launched the MPF Portable Fire Extinguisher — a pioneering product designed to tackle both conventional and lithium-ion battery fires — drawing strong interest from clients and experts alike, and marking a significant advance in commercial fire safety technology.

Industry peers and judges acknowledged Trinity's entry as among the most complete and ambitious in a

field crowded with strong contenders — a reflection of the high-standard approach PTSG adopts across its specialist divisions.

By reaching the final round across fire prevention, security innovation and sustainability, Trinity highlights the value of combining technical expertise, forward-looking innovation and a commitment to compliance. For PTSG, the recognition reinforces the Group's position at the forefront of the facility services sector.
