

## PTSG Appointed to Deliver Water Treatment Services for StormGeo

3 months ago

**PTSG**, through its constituent company HCS Water Treatment, has secured a contract to deliver specialist water treatment services for StormGeo, a global provider of weather intelligence and decision-support solutions for the shipping, energy and weather-sensitive sectors.

StormGeo supports organisations in managing weather-related risk and operational volatility, using advanced data analytics, technology platforms and industry expertise to provide actionable insights. Its services help clients optimise operations, protect assets and improve safety across complex and dynamic environments.

Under the contract, HCS engineers will deliver a range of water treatment services across StormGeo's facilities, ensuring systems are managed in line with current regulations and industry best practice. The programme will focus on maintaining compliance, mitigating risk and supporting safe, efficient building operations.

HCS Water Treatment's approach is built around four core pillars: innovation, technical expertise, robust systems and skilled people. The business invests in advanced technology and training to simplify compliance for clients and provide transparent, reliable water safety management.

The appointment reinforces PTSG's capability to support specialist, technology-led organisations with critical compliance services and highlights the Group's continued expansion in the water treatment and building compliance markets.
