

## PTSG Completes Fire Door Inspection Programme at Major Cambridge Office Scheme

4 months ago

[Premier Technical Services Group](#) (PTSG), through its specialist subsidiary Neo, has successfully delivered a comprehensive fire door inspection programme at a prominent office development in Cambridge, further strengthening its position in the delivery of life safety compliance services within complex commercial environments.

The project involved inspections across a portfolio of landmark, multi-storey office buildings occupied by blue-chip tenants, where operational sensitivity and minimal disruption were essential. All works were undertaken while the buildings remained fully in use, requiring careful coordination with site management and security teams to align inspections with business activity, access restrictions and tenant requirements.

The scale and layout of the estate presented a number of logistical challenges, including large open-plan office areas, shared amenities, plant rooms and multiple circulation routes. Detailed planning was required to ensure every fire door was accurately identified, accessed and assessed within tight timeframes.

Despite these constraints, Neo's accredited inspectors completed the programme efficiently and without impact on daily operations, delivering right-first-time inspections in line with current fire safety legislation and best practice standards.

Neo's specialist surveyors applied third-party accredited expertise across a wide variety of door types, supported by structured digital reporting. This provided building owners and managing agents with clear defect categorisation, photographic evidence and prioritised remedial recommendations aligned to

compliance and leaseholder obligations.

The successful completion of the contract underlines PTSG's capability to support high-profile commercial portfolios with robust, evidence-based fire safety solutions, delivered professionally and with minimal disruption to occupiers.
