

Amulet Wins Outstanding Security Installer/Integrator at the OSPAs

2 months ago

[Amulet](#)'s sustained growth, technical innovation, and measurable client outcomes across its installation and integration services has been recognised with the Outstanding Security Installer/Integrator award at the 2026 UK Outstanding Security Performance Awards (OSPAs).

Since launching its installation division in 2018, Amulet has delivered 15% year-on-year revenue growth and retained more than 95% of its customers, underpinned by an intelligence-led approach that combines skilled people with technical innovation.

Central to Amulet's offering is its NSI Gold-accredited 24/7 Command and Control Intelligence Centre (CCIC), which monitors and maintains access control, CCTV, fire and intruder alarm, and specialist vendor management systems across multiple customer sites. Since 2022, the team has completed more than 11,500 jobs under NSI Gold standards. Its most recent NSI audit recorded zero findings and 100% compliance.

The award also recognised Amulet's work across several high-profile projects.

Project Blueprint, Amulet's exclusive real-time situational awareness platform, was also highlighted as a key differentiator. Already used by public sector emergency and security agencies, Amulet introduced the platform to the private security market, providing customers with remote access to live incident logs and a tool for enhanced security preparedness.

Kieran Mackie, managing director at Amulet, said: "Our installation and integration capabilities have grown enormously over the past seven years, and that growth is down to the talent and commitment of the people behind it. This recognition reflects what is possible when you combine the right people with the

right technology. We're proud of what we've achieved and looking forward to representing the UK at the Global OSPAs."

As a winner of the 2026 UK OSPAs, Amulet has been automatically entered into the Global OSPAs, which will be announced in a virtual ceremony at the beginning of 2027.
