

Kärcher UK Launches the Next Generation of its Dry Vacuums: the T-Range

3 hours ago

[Kärcher UK](#) has announced the launch of its [new T-Range dry vacuum range](#), comprising four models available in both corded and battery-powered versions, with hopper capacities of up to 15 litres. Designed for discreet daytime cleaning and reliable, powerful performance, the T-Range is the perfect cleaning solution for hospitality, facilities management and busy office settings.

The new range comes with an all-new modular design for the T 10/1 and T 15/1 models. The T-Range is slim and ergonomic, making it compact and easy to store, ideal for those tighter storage spaces. Moreover, users are saved any additional physical stress and fatigue as the design makes transport simpler and more comfortable. The dry vacuums also function easily and effectively thanks to the sophisticated and straightforward nature of the machines.

Furthermore, the new portfolio of dry vacuums provides maximum flexibility. The new ergonomic design comes with both corded and battery powered variants ensuring that the machines can fully adapt to any cleaning challenge. The heads and containers of the new models showcase complete adjustability as they can be quickly and easily changed depending on the scenario the user finds themselves in.

The T-Range continues to showcase Kärcher's commitment to innovation through the introduction of the manual cable reel. The cable reel for the T 10/1 HEPA is capable of being rolled up in seconds which means that efficiency is increased and time management is far more attainable, leading to better productivity.

The new T-Range is particularly effective in situations where low noise pollution is paramount. The corded T 10/1 HEPA model operates at an impressively quiet noise level at only 52 dB(A) thanks to a particularly efficient motor and the special encapsulation and fastening. When cleaning in any environments that are

noise sensitive, such as offices or public buildings, the new T-Range vacuums are the ideal machines to ensure ongoing operations remain undisturbed.

Kärcher continues to make a difference with the T-Range through the range's strong sustainability credentials. Our latest sustainable line features recycled plastic throughout: 45% across the T 10/1 and T 15/1 models and a benchmark of 60% for the T 11/1 Re!Plast. This reinforces the company's ongoing commitment to sustainability. The use of recycled materials reduces the energy required for production, conserving valuable raw materials and saving up to 2.0 kilograms of plastic per machine. The recycled plastic is sourced from production waste, helping to protect natural resources while remaining uncompromising on quality.

Vivienne Speckmaier, Product Manager at Kärcher UK commented: "With the launch of the new T Range, we've truly listened to what our customers need from professional vacuuming today. It's no longer just about suction power – it's about durability, time-saving performance, ergonomics and noise reduction. The T-Range has been developed as a flexible system that adapts to different environments, enabling faster cleaning cycles and reducing downtime. More than just a vacuum cleaner, it's a robust productivity tool designed to be as sustainable as it is effective. We're confident there is a solution within the range for every cleaning challenge, and we welcome feedback as we continue to support our customers' operations."
