

Corps Security Launches Corps Intel Intelligence Services

2 months ago

Social enterprise security specialist [Corps Security](#) has launched its Corps Intel to provide intelligence, specialist risk management and tailored consultancy services.

Corps Intel's range of comprehensive advisory services respond to the evolving threat landscape faced by businesses today. This not only includes criminal activity, but also factors that can disrupt or harm business activities and reputation, including protest and activism, misinformation and disinformation, geopolitical instability and increasingly interconnected systems which expose greater vulnerabilities. In the current climate, threats and threat actors can appear seemingly without warning and often unseen to their targets, demanding security intelligence that is broader, deeper, and even more connected.

Corps Intel aids organisations in understanding their exposure to threats, identifying risks earlier, and acting decisively before disruption occurs. Corps Intel's analyst-led intelligence delivers a suite of services, including threat monitoring; digital footprint assessments; physical penetration and contingency testing; policy and procedure development and implementation; expert witness services; security consultancy; and subject matter expert services.

Corps Intel builds on Corps Consult, the security services provider's specialist consulting and advisory services.

Neil Shanks, Director of Corps Intel said: "A business is only as strong as its weakest point. 99% of a business's continuity plan may be strong, but if 1% isn't, the business is at risk. Organisations need to spot a threat before it arrives at their door and have the correct procedures in place to deal with it effectively. It's this peace of mind that Corps Intel provides."
