

phs Group Launches Ultra-compact, Ultra-fast Hand Dryer to Transform Busy Washrooms

2 months ago

Hygiene services provider [phs Group](#) has launched its most compact hand dryer yet, the phs Airstream Nano, designed to reduce congestion in high-traffic washrooms.

With a dry time of less than 13 seconds, the phs Airstream Nano ensures hands are dried quickly and thoroughly, helping to improve user flow and minimise bottlenecks in busy environments.

At just 10cm deep, the slim, lightweight unit is ideal for installation in cubicles, narrow corridors and restricted spaces, making it a practical solution for washrooms where space is at a premium.

phs is the leading hygiene services providers in the UK, Ireland and Spain with 120,000 customers over 300,000 locations and has a dedicated product innovation team in-house, as well as working with an array of trusted, verified suppliers.

Matthew Brabin, Chief Executive Officer at phs Group, said: “We’re proud to launch our most compact hand dryer yet, the phs Airstream Nano. With a dry time of less than 13 seconds, it is a great choice for busy washrooms. This ultra-compact, energy-efficient solution gives facilities an instant hygiene upgrade while supporting smooth washroom flow.”

Engineered for performance and reliability, the phs Airstream Nano combines powerful drying with advanced hygiene and low running costs. A 500W energy-efficient motor delivers strong airflow, while integrated HEPA filtration removes 99.9% of bacteria and viruses, ensuring cleaner, safer washrooms.

Additional features include a full-width air slot for fast, even drying, and a secure ‘click-on’ backplate system, part of phs’ Connect technology, allowing for quick installation and easy maintenance.

The durable PC ABS casing is built to withstand demanding environments, while an integrated noise control switch offers flexible operation across different settings.
