

Legrand Relaunches Free Commissioning Service for Education Buildings

3 hours ago

[Legrand UK & Ireland](#) is offering [free commissioning services](#) to anyone purchasing CP Electronics lighting control systems for an education building this summer, with the return of an offer designed to help facilities managers achieve compliance within limited budgets.

The offer, which is available until the end of 2026, follows a successful pilot of the scheme in 2024 and is intended to help schools, and other education buildings, meet recommendations from CIBSE.

The *CIBSE Guide M6: Commissioning and Tests*, states 'comprehensive documentation to support commissioning and testing activities is important'. It also explains that gaps in commissioning documentation, such as a commissioning certificate, cast doubt on the suitability or capability of the original design.

Depending on the size of the facility, commissioning can take several days to complete, adding to the overall cost, and reducing budget for other valuable upgrades and equipment. Free commissioning will be offered to anyone requiring a lighting control system in an education building, such as a school.

When providing a quote, Legrand will calculate the number of commissioning days required for the system and apply this to the part code at no charge. Any lighting control system from CP Electronics, a brand of Legrand, is part of this offer.

Lee Austin, Head of Sales – Lighting Controls at Legrand UK & Ireland said: "When we first launched our free commissioning for education offer back in 2024, we saw enormous demand from schools, universities and other settings.

“Given the success of our original offer, we’re bringing it back to help educational facilities balance the need to provide the highest standard of working environment for pupils while meeting safety and efficiency requirements. Of course, this is never easy, but the challenge is exacerbated when considering the strict budgets the industry has to work within.

“We want to help schools overcome challenges that impact learning, and lighting plays a key role in creating an environment that lets pupils achieve their potential. That’s why we are offering commissioning services free of charge when one of our CP Electronics lighting control systems is installed into an educational facility.”

For more information, including Terms & Conditions, please visit: <https://www.legrand.co.uk/en/cp-electronics-free-commissioning>

Schools can obtain further details of the offer by speaking with their local Legrand sales representative.
