

Ansell Lighting Unveils Opti-Lux Pro

3 hours ago

Enhancing its portfolio and high and low bay luminaires, [Ansell Lighting](#) has added the Opti-Lux Pro to its range.

Designed for use in retail and commercial applications, the LED high bay delivers 150lm/W efficiency and features an etched diffuser for glare-free illumination.

The Opti-Lux Pro is power selectable from 60W to 200W and colour selectable between 3000K and 4000K, offering a range of output and temperature options for warehouse and retail units requiring reliable, high-quality lighting.

Developed to give installers greater flexibility and speed up projects, Opti-Lux Pro features a quick access gear tray with push fit connectors and is supplied with both a suspension kit and surface bracket.

A standout feature is the inclusion of a Zhaga socket allowing plug and play sensors including MWS, PIR and Casambi wireless control to be used with the product. This allows for easy sensor changes, while the adjustable detection range and hold time enables customised lighting control and energy efficiency.

Mark Abbott, Managing Director at Ansell Lighting said: “Opti-Lux Pro has been developed with both installers and end-users in mind. We wanted to create a lower glare high bay luminaire that not only makes installation as straightforward as possible but also delivers the reliability and quality of light that warehouses and retail units rely on every day.”
