

Keynetics to Debut at Security Essen 2026

5 hours ago

The UK-based [Keynetics](#) will exhibit at Security Essen for the first time, showcasing SentiGuard, its smart key-management solution for controlled, auditable access to physical keys.

On Keynetics' Stand 5A40 in Hall 5, exhibition visitors will have the opportunity to see the independently attack-tested and LPS 1175 C1 and C3-certified SentiGuard smart key safes in action. The team will also demonstrate the Access+ platform and mobile app that enable remote access management and offer a full audit trail while allowing organisations to retain their existing locks and keys.

Taking place from 22-25 September in Essen, Germany, Security Essen provides an important platform for Keynetics as it expands through security partnerships and customer projects in Germany, Belgium, Switzerland, Austria and the Netherlands.

Stuart Wheeler, Managing Director of Keynetics, comments, "We are delighted to exhibit at Security Essen and introduce SentiGuard to a wider audience of security professionals and organisations across Europe".

He continues, "Security organisations need to respond faster, control physical keys more effectively and know who accessed a site and when, and SentiGuard supports those goals.

"We are looking forward to demonstrating the system, its ease of use, audit capabilities and workflow to visitors, and we are equally as excited to meet our existing partners, customers and industry contacts at the exhibition to continue our conversations about effective, technology-enabled keyholding."

A leading German security partner will join Keynetics on the stand to support SentiGuard demonstrations and discuss mobile security, keyholding and alarm-response applications with attendees.
